## भारत का जलवायु नैदानिक बुलेटीन CLIMATE DIAGNOSTICS BULLETIN OF INDIA

सितम्बर 2023  
SEPTEMBER 2023

### वास्तविक समय के आंकड़ों पर आधारित विश्लेषण NEAR REAL - TIME ANALYSES

द्वारा जारी : जलवायु निगरानी एवं प्रागुक्ती समूह  
ISSUED BY : Climate Monitoring & Prediction Group

## सितम्बर 2023 (सारांश)

### माह की मुख्य विशेषताएं

#### **प्रमुख बिंदु :**

सितम्बर माह मे पूरे भारत का माध्य तापमान ( $28.22^{\circ}\text{से.}$ ) 1901 से सबसे अधिक रहा। अधिकतम तापमान ( $32.22^{\circ}\text{से.}$ ) 1901 से दुसरा सबसे अधिक रहा। न्यूनतम तापमान ( $24.22^{\circ}\text{से.}$ ) 1901 से सबसे अधिक रहा। पूर्व और उत्तर-पूर्व भारत का न्यूनतम तापमान ( $25.12^{\circ}\text{से.}$ ) और अधिकतम तापमान ( $33.42^{\circ}\text{से.}$ ) 1901 से सबसे अधिक रहे। उत्तर-पश्चिम भारत का अधिकतम तापमान ( $32.99^{\circ}\text{से.}$ ) 1901 से तिसरा सबसे अधिक रहा। न्यूनतम तापमान ( $22.65^{\circ}\text{से.}$ ) 1901 से दुसरा सबसे अधिक रहा। मध्य भारत का न्यूनतम तापमान ( $24.44^{\circ}\text{से.}$ ) 1901 से दुसरा सबसे अधिक रहा।

#### **दक्षिणी-पश्चिमी मानसून की वापसी :**

आकृती 1 में दक्षिणी-पश्चिमी मानसून की वापसी का मानचित्र दर्शाया गया है। 25 सितम्बर को पश्चिमी राजस्थान से दक्षिणी-पश्चिमी मानसून की वापसी शुरू हुई।

#### **वर्षा की विशेषताएं :**

36 मौसम उप मंडलों में से 3 में सामान्य से अधिक, 15 में अधिक, 12 में सामान्य, 6 में सामान्य से कम, वर्षा हुई (आकृती 2(ए))। तालिका 1 में, सितम्बर 2023 के उप मंडल-वार वर्षा के आँकडे (मि. मी.) में दर्शाए गए हैं। आकृती 2 (बी) में जून से सितम्बर माह के संचित उप मंडल-वार वर्षा के आँकडे (मि. मी.) में दर्शाए गए हैं।

आकृती 3(ए) में माह के दौरान देश के विभिन्न भाग में हुई वर्षा (मि. मी.) दर्शायी गयी है। आकृती 3(बी) में माह के दौरान देश के विभिन्न भाग में हुई वर्षा विसंगति (मि. मी.) दर्शायी गयी है। आकृती 4 में सितम्बर के चार सप्ताहों का वास्तविक, दीर्घावधि औसत (एल.पी.ए.) और उसका प्रतिशत विचलन का स्थानिक रूप दर्शाया गया है।

आकृती 5 महीने के दौरान पूरे भारत और चार समरूप क्षेत्रों में दैनिक वर्षा भिन्नता दर्शाता है। पूरे देश में, माह के दीर्घावधि औसत मान का  $113\%$  वर्षा हुई। आकृती 6 में वर्ष 1951 से अब तक के सम्पूर्ण भारत की और चार समरूपी क्षेत्रों की क्षेत्र भारित वर्षा श्रृंखला दर्शाई गयी है।

माह की वर्षा भारत के दक्षिण प्रायद्विप में (एल.पी.ए. का  $124\%$ ), पूर्व और उत्तर-पूर्व भारत में (एल.पी.ए. का  $75\%$ ), मध्य भारत में (एल.पी.ए. का  $149\%$ ) तथा उत्तर-पश्चिम भारत में (एल.पी.ए. का  $89\%$ ) रही। तालिका 2 में माह के दौरान 24 घंटों में हुई भारी ( $64.5$  से  $115.5$  मि. मी तक), अति भारी ( $115.6$  से  $204.4$  मि. मी. तक), या अत्यधिक भारी ( $\geq 204.5$  मि. मी. या अधिक) वर्षा वाले स्टेशनों की सूची दर्शाई गई है। आकृती 7 में भारी, अति भारी और अत्यधिक भारी वर्षा वाले स्टेशन दर्शाए गए हैं।

#### **मानकीकृत वर्षण सूचकांक (एस.पी.आई.):**

मानकीकृत वर्षण सूचकांक अनावृष्टि मापने का एक सूचकांक है जो केवल वर्षा पर आधारित होता है। यह सूचकांक शुष्क स्थिति में ऋणात्मक और आर्द्ध स्थिति में धनात्मक होता है। जब शुष्क या आर्द्ध मौसम की स्थिति अधिक भीषण होती है, तब सूचकांक अधिक ऋणात्मक या धनात्मक होता है। आकृती 8(ए, बी, सी) में सितम्बर 2023, जून - सितम्बर 2023 (4 माह के संचित) तथा जनवरी 2023 - सितम्बर 2023 (9 माह के संचित) के मानकीकृत वर्षण सूचकांक दर्शाए गए हैं।

सितम्बर माह के दौरान अन्दमान और निकोबार द्वीपसमूह, ओडिशा, जम्मु कश्मीर और लदाख, पूर्वी राजस्थान, मध्य प्रदेश राज्य, गुजरात, छत्तीसगढ़, तेलंगणा, रायलसीमा और तामिलनाडु पुढुच्चेरी और करायकल के कुछ भाग में चरम आर्द्ध / प्रचंड आर्द्ध स्थितियाँ रहीं, जबकि अरुणाचल प्रदेश, आसाम और मेघालय, नागालैंड,

मणिपुर, मिझोराम, त्रिपुरा, उप हिमालयीन पश्चिम बंगाल और सिक्किम, बिहार, जम्मु कश्मीर और लदाख और दक्षिणी आंतरिक कर्नाटक के कुछ भाग में चरम शुष्क / प्रचंड शुष्क स्थितियाँ रहीं ।

#### दाब :

आकृती 9(ए) तथा 9(बी) क्रमशः माध्य समुद्र तल दाब तथा इसकी विसंगति दर्शाते हैं । अधोरेखा द्वारा ऋणात्मक मान दर्शाए गए हैं ।

#### पवन:

आकृती 10(ए) तथा 10(बी), 11(ए) तथा 11(बी), 12(ए) तथा 12(बी) में क्रमशः पवन का 850, 500 और 250 एच.पी.ए. स्तरों पर माध्य परिसंचरण स्वरूप तथा इसकी विसंगति को दर्शाता है ।

#### वेग विभव तथा धारा कृत्य (वेलोसिटी पोटेन्शियल और स्ट्रीम फंक्शन):

आकृती 13(ए) तथा 13(बी) में 250 एच.पी.ए. स्तर पर माध्य वेग विभव तथा इसकी विसंगति को दर्शाया गया है । इसी प्रकार आकृती 14(ए) तथा 14(बी) में माध्य धारा कृत्य तथा इसकी विसंगति को दर्शाते हैं । अधोरेखा द्वारा ऋणात्मक मान दर्शाये गए हैं ।

#### बहिर्गमी दीर्घतरंग विकिरण (ओ.एल.आर.) :

भारत के क्षेत्रों तथा आसपास की बहिर्गमी दीर्घतरंग विकिरण ( $\text{वॉट}/\text{मी}^2$ ) आकृती 15 में दर्शाई गई है ।

#### तापमान:

माध्य मासिक अधिकतम तथा न्यूनतम तापमान विसंगति आकृती 16(ए) तथा 16(बी) में दर्शाई गई है ।

#### उष्ण दिनों / शीत रात्रियों का प्रतिशत:

आकृती 17(ए) तथा 17(बी) में अधिकतम (न्यूनतम) तापमान जब 90वें (10वें) पर्सेटाइल से अधिक(कम) वाले दिनों का प्रतिशत दर्शाया गया है । आकृती 18 में पूरे देश में सितम्बर माह में 1971 से अब तक के औसत तापमान दर्शाये गए हैं । 5 वर्ष के चल औसत भी दर्शाये गए हैं । इस वर्ष के सितम्बर माह का औसत तापमान  $28.22^{\circ}\text{से. रहा}$ , जो 1901 से सबसे अधिक रहा । आकृती 19(ए) तथा 19(बी) में चारों समस्यी क्षेत्रों के वर्ष 1971 से अब तक के सितम्बर माह के दौरान रहे अधिकतम और न्यूनतम तापमानों की श्रृंखला दर्शाई गई है ।

आकृती 20(ए) तथा 20(बी) में महीने के दौरान पुरे भारत में दैनिक अधिकतम और न्यूनतम तापमानों विसंगति की श्रृंखला दर्शाई है । तालिका 3 में माह के दौरान की तापमान विसंगति दर्शाई गयी है ।

#### निम्न दाब प्रणालियाँ:

इस माह अरब सागर में एक अवदाब बना और बंगाल की खाड़ी में चार निम्न दाब क्षेत्र बने, उनमें से दो सुम्पष्ट चिह्नांकीत निम्न दाब क्षेत्र बने । आकृती 21 में अवदाब का मार्ग दर्शाया गया है ।

#### हिन्द एवं प्रशान्त महासागरों पर समुद्री सतह तापमान विसंगति:

आकृती 22 उष्ण कटिबंधीय हिन्द एवं प्रशान्त महासागरों पर समुद्री सतह तापमान विसंगति दर्शाता है ।

#### दक्षिणी दोलन सूचकांक तथा प्रशान्त समुद्री सतह तापमान सुचकांक:

दक्षिणी दोलन सूचकांक (तालिका 4) इस माह के दौरान ऋणात्मक (-2.1) रहा ।

**एन्सो पूर्वानुमान:** आकृती 23 आने वाले ऋतुओं के लिये एम.एम.सी.एफ.एस. एन्सो पूर्वानुमान दर्शाता है ।

**आपल्कालीन मौसम घटनाएः** आकृती 24 आपल्कालीन मौसम घटनाए दर्शाता है ।

## **SEPTEMBER - 2023**

### **MAIN FEATURES OF THE MONTH**

#### **Highlights:**

In September, over the country, the mean temperature was  $28.22^{\circ}\text{C}$  with an anomaly of  $0.91^{\circ}\text{C}$  and it was highest since 1901. Over the country as a whole the maximum temperature was  $2^{\text{nd}}$  highest ( $32.22^{\circ}\text{C}$  with an anomaly of  $0.86^{\circ}\text{C}$ ) after the year 2015( $32.39^{\circ}\text{C}$ ) and the minimum temperature was highest ( $24.22^{\circ}\text{C}$  with an anomaly of  $0.96^{\circ}\text{C}$ ) since 1901.

Among the four homogeneous regions, over Northwest India the maximum temperature was  $3^{\text{rd}}$  highest ( $32.99^{\circ}\text{C}$  with an anomaly of  $1.23^{\circ}\text{C}$ ) after the years 1968( $33.55^{\circ}\text{C}$ ), 1987( $33.02^{\circ}\text{C}$ ) and the minimum temperature was  $2^{\text{nd}}$  highest ( $22.65^{\circ}\text{C}$  with an anomaly of  $1.66^{\circ}\text{C}$ ) after the year 2021( $22.66^{\circ}\text{C}$ ) since 1901. Over East & Northeast India the maximum temperature was highest ( $33.42^{\circ}\text{C}$  with an anomaly of  $2.25^{\circ}\text{C}$ ) and minimum temperature was also highest ( $25.12^{\circ}\text{C}$  with an anomaly of  $1.34^{\circ}\text{C}$ ) since 1901. Over Central India the minimum temperature was  $2^{\text{nd}}$  highest ( $24.44^{\circ}\text{C}$  with an anomaly of  $0.73^{\circ}\text{C}$ ) after the year 2020( $24.70^{\circ}\text{C}$ ) since 1901.

#### **Withdrawal of southwest monsoon:**

Withdrawal of southwest monsoon began from southwest Rajasthan on 25<sup>th</sup> September, 2023 against its normal date of 17<sup>th</sup> September. The withdrawal line passed through Gulmarg, Dharamshala, Pantnagar, Etawah, Morena, Sawai Madhopur, Jodhpur, Barmer and  $25.7^{\circ}\text{N}/70.3^{\circ}\text{E}$  by 30<sup>th</sup> September.

Fig.1 shows the isochrones of withdrawal of Southwest Monsoon 2023 till 30<sup>th</sup> September.

#### **Rainfall Features:**

Except Arunachal Pradesh, Assam & Meghalaya, Nagaland, Manipur, Mizoram & Tripura, East Uttar Pradesh, Himachal Pradesh and Haryana, Chandigarh & Delhi remaining subdivisions received large excess/excess/normal rainfall.

Out of 36 meteorological subdivisions, 3 received large excess rainfall, 15 received excess rainfall, 12 received normal rainfall, 6 subdivisions received deficient rainfall (Fig.2a). Table 1 shows the subdivision wise rainfall statistics (mm) for September 2023. Fig. 2(b) shows the meteorological subdivision wise cumulative rainfall percentage departures for the season from 1<sup>st</sup> June to 30<sup>st</sup> September. Cumulative rainfall was excess over 3 sub divisions, normal over 26 and deficient over 7 meteorological sub divisions.

Fig. 3(a) shows the spatial pattern of rainfall (mm) received during the September 2023. Parts of Arunachal Pradesh, Assam & Meghalaya, Nagaland, Manipur, Mizoram & Tripura, Sub Himalayan West Bengal & Sikkim, Odisha, Bihar, Uttarakhand, Chhattisgarh, East and west Madhya Pradesh, Vidarbha Gujarat Region, Tamilnadu, Puducherry & Karaikal, entire west coast and both the islands received more than 300 mm of rainfall.

Fig. 3(b) shows the spatial pattern of rainfall anomaly (mm) during the month. Positive rainfall anomaly more than 150 mm was observed over parts of Andaman & Nicobar islands, East and west Madhya Pradesh, Gujarat Region, East Rajasthan, Chhattisgarh, Vidarbha, Odisha, Tamilnadu, Puducherry & Karaikal and entire west coast. Magnitude of negative rainfall anomaly was more than 150 mm over parts of Arunachal Pradesh, Assam & Meghalaya, Sub Himalayan West Bengal & Sikkim, Bihar and East Uttar Pradesh.

Fig. 4 shows the spatial pattern of actual, Long Period Average (LPA) rainfall and its percentage departure during the four weeks of September 2023. Fig 5 shows daily variation of the rainfall over the country as a whole and four homogeneous regions during the September 2023.

Fig. 6 shows area weight averaged rainfall series for September over all India and four homogeneous regions since 1951. Rainfall realized over the country as a whole was 113% of its LPA during the September 2023. The realized rainfall for the month of September this year was 89% of its LPA over northwest India, 149% of its LPA over central India, 75% of its LPA over east & northeast India and 124% of its LPA over south peninsula.

Table 2 gives the list of stations which received very heavy (115.6 to 204.4 mm) or extremely heavy ( $\geq 204.5$  mm) rainfall in 24 hours during the month. Fig. 7 depicts stations which received heavy (64.5 to 115.5 mm), very heavy (115.6 to 204.4 mm) or extremely heavy ( $\geq 204.5$  mm) rainfall.

Some stations received highest 24-hour record rainfall. A list of stations is given below with their previous record and date.

STATION	24 HOUR RECORD RAINFALL IN SEPTEMBER 2023(mm) <sup>#</sup>	DATE	PREVIOUS RAINFALL RECORD(mm)	DATE (DD-MM-YYYY)	STATE
SABOUR	187.0	22	162.5	28-09-1995	Bihar
SUPAUL	217.4	24	167	27-09-1975	Bihar
MALANJKHAND	166.6	15	140.3	11-09-1992	Madhya Pradesh
DHAR - AWS	301.3	17	161.4	08-09-2010	Madhya Pradesh
MANDVI	64.0	7	61	14-09-1961	Gujarat
BILASPUR	135.6	15	83.8	19-09-2008	Chhattisgarh
DURG	170.4	23	130.4	15-09-1983	Chhattisgarh
RAJNANDGAON	110.0	15	103	05-09-1994	Chhattisgarh

#Based on real time available data

### Standardized Precipitation Index:

The Standardized Precipitation Index (SPI) is an index used for monitoring drought and is based only on precipitation. This index is negative for dry, and positive for wet conditions. As the dry or wet conditions become more severe, the index becomes more negative or positive. Fig 8 (a, b, and c) gives the SPI values for the month of September 2023, June - September 2023 (4 months cumulative) and January 2023 - September 2023 (9 months cumulative) respectively.

During September, extremely wet/severely wet conditions were observed over parts of Andaman & Nicobar Islands, Nagaland, Manipur, Mizoram & Tripura, Odisha, Jammu & Kashmir & Ladakh, East Rajasthan, Madhya Pradesh state, Gujarat Region, Chhattisgarh, Telangana, Rayalaseema and Tamil Nadu & Karaikal while, extremely dry/severely dry conditions were observed over parts of Arunachal Pradesh, Assam & Meghalaya, Nagaland, Manipur, Mizoram & Tripura, Sub Himalayan West Bengal & Sikkim, Bihar, Jammu & Kashmir & Ladakh and South Interior Karnataka.

Cumulative past four months SPI values indicate, extremely wet/severely wet conditions over parts of Andaman & Nicobar Islands, Nagaland, Manipur, Mizoram & Tripura, West Uttar Pradesh, Uttarakhand, Haryana, Chandigarh & Delhi, Himachal Pradesh, West Madhya Pradesh, Saurashtra & Kutch, Chhattisgarh and Tamil Nadu & Karaikal while, extremely dry/severely dry conditions were observed over parts of Arunachal Pradesh, Assam & Meghalaya, Nagaland, Manipur, Mizoram &

Tripura, Gangetic West Bengal, Jharkhand, Bihar, Uttar Pradesh state, Madhya Maharashtra, Chhattisgarh, South Interior Karnataka and Kerala & Mahe.

Cumulative SPI values of the nine months indicate, extremely wet/severely wet conditions over parts of Andaman & Nicobar Islands, Uttar Pradesh state, Uttarakhand, Haryana, Chandigarh & Delhi, Himachal Pradesh, Rajasthan state, West Madhya Pradesh, Saurashtra & Kutch, Chhattisgarh, Andhra Pradesh state, Telangana, and Tamil Nadu & Karaikal while, extremely dry/severely dry conditions were observed over parts of Arunachal Pradesh, Assam & Meghalaya, Nagaland, Manipur, Mizoram & Tripura, Gangetic West Bengal, Jharkhand, Bihar, East Uttar Pradesh, Madhya Maharashtra, Chhattisgarh, Coastal Karnataka, South Interior Karnataka and Kerala & Mahe.

### **Pressure & Wind:**

Figs. 9(a) and 9(b) show the mean sea level pressure & its anomaly respectively. The pressure anomaly was negative over most parts of the country. It was less than -1.5 hPa over most parts of the country, except some northern parts and extreme south peninsular parts.

Figs. 10(a) and 10(b), 11(a) and 11(b) and 12(a) and 12(b) shows the mean circulation pattern and its anomaly at 850, 500 & 250 hPa levels respectively. At 850 hPa level, an anomalous anticyclonic circulation was observed over southeast Arabian Sea. At 500 hPa level, an anomalous anticyclonic circulation was observed over southeast Arabian Sea and an anomalous cyclonic circulation was observed over Bay of Bengal. At 250 hPa level, an anomalous anticyclonic circulation was observed over Afghanistan, Pakistan and adjoining north India.

### **Velocity Potential & Stream Function:**

Figs. 13(a) and 13(b) show the 250 hPa mean Velocity Potential & its anomaly for the month of June 2023. Similarly, Figs. 14(a) and 14(b) show the mean stream function & its anomaly at 850 hPa level. Anomaly in the velocity potential at 250 hPa level was negative throughout the country and anomaly in the stream function at 850 hPa level was positive over most parts of the country, except some parts of central India.

### **Outgoing Longwave Radiation (OLR):**

OLR anomaly ( $\text{W/m}^2$ ) over the Indian region and neighbourhood is shown in Fig 15. OLR anomaly was negative over most parts except extreme northeastern, extreme northwestern and some parts of northwest Bay. Negative OLR anomaly less than  $-20 \text{ W/m}^2$  was observed over parts of south peninsula and adjoining Bay and Arabian Sea and northern India.

### **Temperature:**

Mean monthly maximum and minimum temperature anomaly is shown in Figs. 16(a) and 16(b) respectively. Maximum temperature was above normal over most parts of the country, except some parts of east India, southern northwest India, central India and south peninsular India. Maximum temperature anomaly was more than  $3^\circ\text{C}$  over parts of Himachal Pradesh, Uttarakhand, Arunachal Pradesh, Assam & Meghalaya and Nagaland. Maximum temperature anomaly was less than  $-1^\circ\text{C}$  over parts of East Madhya Pradesh, Vidarbha and Telangana.

Minimum temperature was above normal over most parts of the country, except some parts of central India, some parts of West Rajasthan, West Uttar Pradesh and South Peninsular India. Minimum temperature anomaly was more than  $3^\circ\text{C}$  over parts Gangatic West Bengal, Bihar, Himachal Pradesh and South Interior Karnataka. Minimum temperature anomaly was less than  $-1^\circ\text{C}$  over parts of East Madhya Pradesh, Madhya Maharashtra and Marathwada.

Some stations recorded highest maximum temperature for the month. A list of stations is given below with their previous record and date.

Highest Maximum				
STATION NAME	NEW RECORD ( $^{\circ}\text{C}$ ) <sup>#</sup> (September 2023)	DATE	PREVIOUS RECORD ( $^{\circ}\text{C}$ )	DD/MM/YYYY

### Percentage of Warm Days / Cold Nights:

Fig. 17(a) and 17(b) show the percentage of days when maximum (minimum) temperature was more (less) than 90<sup>th</sup> (10<sup>th</sup>) percentile. Over parts of Arunachal Pradesh, Assam & Meghalaya, Nagaland, Manipur, Mizoram & Tripura, Sub Himalayan West Bengal & Sikkim, Bihar, Uttarakhand, West Uttar Pradesh, Jammu & Kashmir & Ladakh, Saurashtra & Kutch and South Interior Karnataka

maximum temperature was greater than 90<sup>th</sup> percentile for more than 50 % of the days of the month. Over parts of Madhya Maharashtra, West Madhya Pradesh and North Interior Karnataka minimum temperature was less than 10<sup>th</sup> percentile for more than 50% of the days of the month.

Fig.18 shows the mean temperature time series for the country as a whole for September since 1971. Five year moving average values are also shown. The mean temperature for the month this year over the country as a whole was 28.22°C with an anomaly of 0.91°C and highest since 1901. Over Northwest India the mean temperature was highest (27.82°C with an anomaly of 1.45°C) and East & Northeast India the mean temperature was also highest (29.27°C with an anomaly of 1.80°C) since 1901. Over Central India the mean temperature was 7<sup>th</sup> highest (28.11°C with an anomaly of 0.55°C) since 1901. Over South Peninsular India the mean temperature was 9<sup>th</sup> highest (28.06°C with an anomaly of 0.37°C) since 1901.

Fig. 19(a) and 19(b) show, the maximum and minimum temperature series respectively for the country as a whole and the four homogeneous regions during September since 1971. Both the maximum and minimum temperature were above normal over all the homogeneous regions. Among the four homogeneous regions, over Northwest India the maximum temperature was 3<sup>rd</sup> highest (32.99°C with an anomaly of 1.23°C) after the years 1968(33.55°C), 1987(33.02°C) and the minimum temperature was 2<sup>nd</sup> highest (22.65°C with an anomaly of 1.66C) after the year 2021(22.66°C) since 1901. Over East & Northeast India the maximum temperature was highest (33.42°C with an anomaly of 2.25°C) and minimum temperature was also highest (25.12°C with an anomaly of 1.34°C) since 1901. Over Central India the minimum temperature was 2<sup>nd</sup> highest (24.44°C with an anomaly of 0.73°C) after the year 2020(24.70°C) since 1901. Over South Peninsular India the minimum temperature was 6<sup>th</sup> highest (24.65°C with an anomaly of 0.47°C) since 1901.

Over the country as a whole the maximum temperature was 2<sup>nd</sup> highest (32.22°C with an anomaly of 0.86°C) after the year 2015(32.39°C) and the minimum temperature was highest (24.22°C with an anomaly of 0.96°C) since 1901. Table 3 shows temperature anomalies for the month over all India and all the four homogeneous regions.

Fig 20(a) and 20(b) shows daily variation of maximum and minimum temperature anomaly over the country and four homogeneous regions during September 2023. Maximum temperature was above normal by equal or more than 5°C over some stations of east & northeast India for many days during the month. The following table gives the list of stations and number of days (frequency) for which the maximum temperature was above normal by equal or more than 5°C (compared to 1981-2010 normal) for more than five days during the month.

MAXIMUM TEMPERATURE	
STATION	FREQUENCY
DIBRUGARH	10
GUWAHATI	8
PASIGHAT	12
TEZPUR	8
BAGHDOGRA	14
DARJEELING	7

## Low Pressure Systems:

During September 2023, 5 Low Pressure Systems (LPS) formed, four over Bay of Bengal and one over Arabian Sea. The LPS over Arabian Sea intensified into Depression (30 Sep. – 1 Oct.). Out of the remaining four LPS over Bay of Bengal, two intensified into Well Marked Low Pressure System (13 - 18 Sep. and 29 Sep. - 2 Oct). The other two LPS formed during 5 – 6 Sep. and 19 – 22 Sep. These systems resulted in good rainfall activity over most parts of the country. Track of the system is given in the following table.

Date/time	Intensity	(Long.° E/Lat. °N )	Area	Past Movement
		72/15		
30/9,03Z	D	72.8/15.9	eastcentral Arabian sea	east-northeastward
30/9,12Z	D	73.2/16.6	eastcentral Arabian sea	east-northeastward
1/10,00Z	D	74/17	south Konkan	Northeastward
	WML	75/18		

**D: Depression, WML: Well marked Low**

Fig. 21 shows track of the system.

## SST anomaly over the Indian & Pacific Ocean:

Fig. 22 shows the anomaly in sea surface temperature over the tropical Indian and Pacific Oceans. Positive SSTs were observed over most of the equatorial Pacific Ocean. Positive SST anomalies were observed over the Arabian Sea and western equatorial Indian Ocean.

## SOI and Pacific SST Index:

SOI (Table 4) was negative (-2.1) during the month. Sea surface temperature anomalies were above normal by about 1°C over all the NINO regions.

Fig. 23 shows the Monsoon Mission Coupled Forecast System (MMCFS) model output forecast for ENSO conditions for the coming seasons. Currently, Moderate El Niño conditions are prevailing over equatorial Pacific and the sea surface temperatures (SSTs) are above average over most of the equatorial Pacific Ocean. The latest MMCFS forecast indicates moderate to strong El Niño conditions are likely to continue during the upcoming season.

## Significant Weather events during September 2023:

Fig. 24 shows significant weather events during the month of September 2023 (based on real time media reports). During September, total 89 persons reportedly claimed dead, more than 50 persons injured & more than 95 livestock perished due to various weather events. The details of causalities given below, which are based on real time media reports.

**Lightning:** Total 70 persons reportedly claimed dead & 50 persons injured & more than 75 livestock perished, during September, because of Lightning. The details of the area effected by the events are summarized and given in the table below;

DATE	DEATH	INJURED	MISSING	LIVESTOCK	DISTRICT (STATE/UT) AFFECTED
8, 10, 11, 15, 17 Sep.	18	13			Barabanki, Deoria, Ghaziabad, Jalaun, Kushinagar, Mirzapur, Pilibhit, Pratapgarh (Uttar Pradesh)
1, 2, 26 Sep.	15	24		8	Angul, Bolangir, Boudh, Cuttack, Dhenkanal, Gajapati, Ganjam, Jagatsinghpur, Kalahandi, Kandhamal, Khordha, Puri (Odisha)

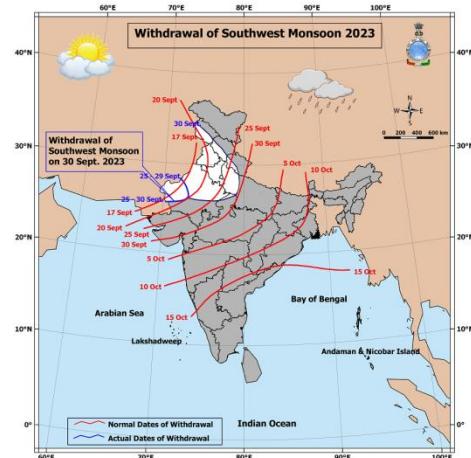

DATE	DEATH	INJURED	MISSING	LIVESTOCK	DISTRICT (STATE/UT) AFFECTED
18 Sep.	13	4			Aurangabad, Gaya, Kaimur, Rohtas, West Champaran (Bihar)
2, 3, 4, 20, 21, 24, 26 Sep.	10	1		8	Akola, Amravati, Chandrapur, Gadchiroli, Jalgaon, Nanded, Yavatmal (Maharashtra)
3, 5 Sep.	4	4			Jayashankar Bhoopalpally, Medak (Telangana)
23 Sep.	2	3			Dumka (Jharkhand)
15 Sep.	2	1		60	Kangra (Himachal Pradesh)
19 Sep.	2				Bilaspur (Chhattisgarh)
8 Sep.	2				Banaskantha (Gujarat)
17 Sep.	1				Udhampur (Jammu & Kashmir)
2 Sep.	1				Kolkata (West Bengal)

**Heavy Rains, Floods & Landslide:** Total 19 persons reportedly claimed dead, 2 persons injured & more than 20 livestock perished during September, because of heavy rains, floods & Landslide. The details of the area effected by the events are summarized and given in the table below;

DATE	DEATH	INJURED	MISSING	LIVESTOCK	DISTRICT (STATE/UT) AFFECTED
9, 23, 26 Sep.	6			14	Chandrapur, Nagpur, Yavatmal (Maharashtra)
10 & 11 Sep.	5	1			Deoria, Hardoi, Kannauj, Muzaffarnagar (Uttar Pradesh)
12 Sep.	4			6	Ramban (Jammu & Kashmir)
8 Sep.	2				Anand (Gujarat)
10 Sep.	1	1			Serchhip (Mizoram)
1, 2 Sep.	1			3	Darrang (Assam)

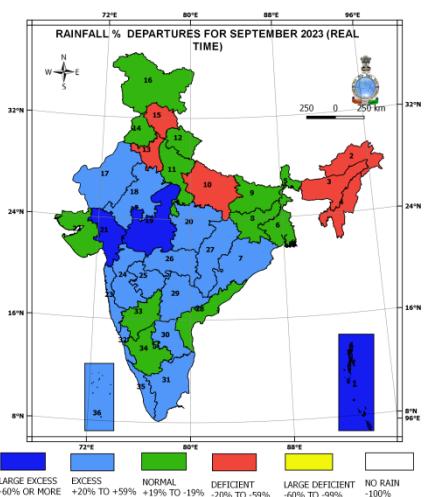

While,

- a) Barpeta, Biswanath, Chirang, Dhemaji, Dhubri, Dibrugarh, Goalpara, Golaghat, Jorhat, Kamrup, Kamrup (M), Lakhimpur, Morigaon, Nagaon, Nalbari, Sivasagar, Sonitpur districts of Assam also affected on 1 & 2 September.
- b) Bharuch, Dahod, Gandhinagar, Narmada, Panchmahal, Vadodara districts of Gujarat affected on 17 & 18 September.
- c) Amethi, Barabanki, Budaun, Jalaun, Kanpur, Mirzapur, Prayagraj, Pratapgarh, Rampur, Sambhal, Sitapur, Sultanpur, Unnao districts of Uttar Pradesh affected on 10 & 11 September.
- d) North & Middle Andaman district of Andaman & Nicobar, Begusarai, Katihar, Madhepura, Samastipur, Supaul districts of Bihar; Aravalli, Chhota Udaipur, Junagadh, Mahisagar, Panchmahal, Sabarkantha districts of Gujarat; Alirajpur, Balaghat, Betul, Dewas, Dhar, Hoshangabad Narmadapuram, Indore, Jhabua, Khandwa (East Nimar), Khargone (West Nimar), Ratlam, Seoni, Ujjain districts of Madhya Pradesh, Ratnagiri district of Maharashtra, Balangir, Koraput, Rayagada district of Odisha, Banswara, Dholpur, Dungarpur districts of Rajasthan, Bairaich, Barabanki, Bareilly, Moradabad, Rampur, Sambhal / Bhimnagar districts of Uttar Pradesh, Malda, Uttar Dinajpur districts of West Bengal also affected due to Extremely Heavy Rains.
