2019

# **Unemployment in India**

## **A Statistical Profile**

**September-December  
2019**

A society where a large proportion of the adult population join the labour force and almost all who do join the labour force are fruitfully employed, is a society that is largely healthy and free of economic vulnerability. Such a society automatically motivates households to spend more to improve their quality of life. In doing so, households propel economic growth and more employment.

A society that cannot provide gainful employment to those who seek it on the other hand, is vulnerable. An increase in unemployment reduces aggregate spending power, slows down the economy and most importantly, it increases the vulnerability of households to deal with economic shocks.

It is therefore not surprising that unemployment rate is one of the most important lead indicators of an economy. In a rapidly changing world it is imperative that such an indicator is available at fast-frequency so that corrective actions can be taken in a timely manner.

CMIE produces this vitally important indicator for India as a public good. The daily and monthly rate of unemployment in India, rural India, urban India and for states of India estimated by CMIE are for free public consumption by all. These estimates are available at

<http://unemploymentinindia.cmie.com>

This is the first instance of private agencies producing an unemployment measure for any country in the world. This is also the first instance of the generation of fast-frequency measure of unemployment.

Introduction of a reliable measure of the unemployment rate would help the domestic and global financial markets understand India's economic health better than it is understood in the absence of such a measure.

Our motivation is to enlighten with the help of reliable data. We hope our measures will help policy makers, investors, entrepreneurs, academia, the media and the public at large.

## Introduction

We are delighted to release this twelfth volume of “Unemployment in India, A Statistical Profile”.

Estimates presented here were generated using data collected during household visits between 1 September 2019 and 31 December 2019.

This volume contains statistical profiles of 28 states and union territories.

For each state, we provide estimates of the labour force, labour force participation rate, employed and unemployed persons and the unemployment rate during the September-December 2019 period. These estimates are presented by educational qualification, age and gender of the individuals. Separately, estimates are presented for urban and rural regions of the individual states as well.

Our effort is to produce these volumes at a faster frequency than is usually attempted in India. Such estimates are made thrice in a year. Further, it is our endeavour to produce the results faster than is usually attempted in India. In this respect our endeavour is to produce such volumes within one month of the completion of the survey. We aim to achieve these without compromising on the size of the survey (it is the largest in the country) and without compromising on the rigour of implementation – this is the most advanced survey execution system in terms of technology application in the country.

Definitions used to estimate labour force, employed and unemployed match with those generally used internationally. With the help of these, while we have estimated the magnitude of the labour force, employed and the unemployed, we have also made estimates of the greater labour force, the greater unemployed and the greater unemployment rate. These estimates will throw new light on the size of the labour force and the size of the unemployed.

## **Definitions**

The employment status data is captured for all members of the sample households who have completed 12 years of age or more as of the date of the survey.

Law does not allow a person of less than 15 years of age to be employed. However, reality can be different. Persons below the age of 15 years may also be employed sometimes. Such persons may be actively looking for jobs sometimes although they may not be employed.

As a result, each member who is of 12 years of age or more on the date of survey is considered suitable for an answer on his/her employment or unemployment status.

We do not capture the employment / unemployment status of persons less than 12 years of age.

The capture of employment status data of persons who are of less than 15 years, however, does not impact the computation of the unemployment rate because these are not taken into consideration in the calculations.

Estimations of labour force, labour participation rate, unemployment rate, greater labour force, greater labour participation rate and greater unemployment rate – are all computed using the employment / unemployment status of persons of 15 years of age or more.

### **Employment / unemployment status**

The employment / unemployment status of each suitable member of the household is captured as of the date of survey. Each suitable member has one of the following statuses:

#### **Employed**

Any person who is engaged in any economic activity either on the day of the survey or on the day pre-

ceding the survey or is generally regularly engaged in an economic activity but did not work on any of these days only temporarily because of scheduled rest days, inability to work on these specific days for reasons such as illness, bad conditions that did not allow him to reach work, festivals or other contingencies or constraints.

A person is taken to be employed if the person claims that the person is employed by the above description.

The above description can be explained further as follows:

If a person is enjoying paid leave during employment then the person is considered employed even on the day of leaves.

If a person has taken leave from work (whether paid or unpaid leave) where there is reasonable surety of going back to the work after the leave then the person is considered employed on the day of absence from work.

Most salaried persons do not go to work everyday. They enjoy weekly off-days, paid leaves and holidays on festivals or on days of national celebrations. On such days, salaried persons and other similarly employed persons are considered employment even on the day of leave.

In small enterprises, most days of absence from work are unpaid leaves. A person working for such an enterprise could be getting a monthly salary, but such a salary is reduced for the days on which the person does not report to work. This could also happen to person who are on probation. Such a person is considered to be employed even on days of such unpaid leaves.

Daily wage workers (both, in agriculture and non-agricultural jobs) often observe a weekly or fortnightly off. In some areas such an off is observed on a day of the lunar calendar. If a person is usually employed and is observing such a day off from work, then such a person is considered employed even on the days of such offs.

If a workplace is temporarily shut because of maintenance or a labour strike then a person who is off-duty from such a workplace is considered employed if the workplace is expected to resume work with the coming 15 days. What matters is the reasonable surety of having a job on hand.

Businessmen of all kinds are always considered employed if their business is operative at the time of the survey.

Family members who assist a family business such as a shop or a farm are considered employed if they state that they are employed. Self assessment of their status is important in such cases.

Persons who are on probation or under training are also considered employed.

A person is considered employment independent of the legality of the job. Smugglers, local gun-das, thieves, prostitutes, beggars are considered employed if they consider themselves to be fully engaged (either through contractual arrangements or through self-employment) in these occupations.

### **Unemployed, willing to work and actively looking for a job**

If a person is not employed, then the reason why the person is not employed becomes very important. There are two possibilities. One, the person may not be working because of lack of interest in working or, two, the person may be interested in working but may not have a job. The first possibility is unambiguous – the person is unemployed by choice. The status of the second case where a person is unemployed because of a lack of a job can be the result of one of two scenarios. First, the person is unemployed because of a lack of a job wherein the person is actively looking for a job. And the second scenario is where a person is unemployed because of a lack of a job but where the person concerned is not actively looking for a job.

The status “Unemployed, willing to work and actively looking for a job” is for a person who is unemployed because of a lack of job *and* where such a person is *actively* looking for a job.

A person classified here should satisfy the following criteria – s/he should be unemployed on the date of the survey, should be actively looking for a job in the 100 hundred days (approximately three months) preceding the date of the survey and should be willing to take up the job if a job is found.

A person is considered to be actively looking for a job if such a person has contacted potential employers for jobs, contacted employment agencies, placement agencies, appeared for job interviews, responded to job advertisements, online employment sites, made applications, submitted resumes to potential employers or reached out to family members, friends, teachers to look for jobs from them.

Reading about jobs available on websites, in newspapers and magazines without doing anything about these does not qualify as actively looking for a job. Attending a workshop or a training program to prepare for appearing for job interviews or for jobs in general is not considered as actively looking for a job.

Waiting for a job offer come is not considered as actively looking for a job.

Waiting for a job offer come in the belief that if such a job offer comes the person will be willing to take up the job is not considered as actively looking for a job. Willing to take up a job if available is a necessary but not sufficient condition for this classification.

### **Unemployed, willing to work and not actively looking for a job**

It is possible that a person is unemployed and is also willing to work, but may not be actively looking for a job. Such a person is unemployed (ie is not working or engaged in any economic activity) and is will-

ing to work if a job is made available. However, such a person is not actively looking for a job.

This means that while such a person is willing to work if a job is available, s/he is not contacting potential employers or placement agencies, is not applying for jobs, is not responding to advertisements or even reaching out to friends, family members of teachers in search for a job.

So, while there is a willingness to work, there is no action on the part of the person to look for a job.

An unemployed person who is willing to work but is not able to accept a job that is available does not qualify to be classified here. It is important to be willing to work, not merely be desirous of a job.

An unemployed person who is willing to work may not be looking for a job because there could be a feeling or a belief that there are no jobs available, or that there is no work to do. This could happen during some times of a year in some places. Till work does not become available in a region, such persons could choose to wait. During this wait period they would be willing to work if work was available but would not be actively looking for a job.

The status of such persons is “Unemployed, willing to work and not actively looking for a job“.

It is possible that an unemployed person has tried to find a job in the past but having failed to find one, has given up trying to look for a job although such a person is willing to work if work becomes available.

If an unemployed person is willing to work but cannot take up a job because of constraints (such as family or social discouragement, or illness or lack of transportation facilities), fear (such as of abuse), unwillingness to accept discrimination (in wages or opportunities in jobs perceived to be available) or just plain diffidence, then the person does not qualify to be a part of this category because although the

person is willing to work, s/he cannot take an available job.

A person who has never worked and is willing to work but is not actively looking for a job is also included in this status.

#### **Unemployed, not willing to work and not actively looking for a job**

A person who is not employed and is not willing to be employed or is not interested in working in any economic activity is classified as “Unemployed, not willing to work and not actively looking for a job”.

Typically, students, homemakers, retired persons and unoccupied persons are classified under this category.

An unemployed person who is willing to work may not take up an available job because of constraints (such as family or social discouragement, or illness or lack of transportation facilities), fear (such as of abuse), unwillingness to accept discrimination (in wages or opportunities in jobs perceived to be available) or just plain diffidence. Such persons are classified under this category. They are unemployed, not willing to work and not actively looking for a job. Here, “willingness” should not be confused with “desirous”. Willingness implies willing to take up an available job.

### **Labour Force (LF)**

Labour force consists of persons who are of 15 years of age or more and are either of the following two categories:

1. are employed
2. are unemployed and are willing to work and are actively looking for a job

**Greater Labour Force (GLF)**

Greater labour force consists of persons who are of 15 years of age or more and are either of the following three categories:

1. are employed
2. are unemployed and are willing to work and are actively looking for a job
3. are unemployed and are willing to work and are not actively looking for a job

**Labour Participation Rate (LPR)**

This is the ratio of the labour force to the population greater than 15 years of age.

**Unemployment Rate (UER)**

This is the unemployed who are willing to work and are actively looking for a job expressed as a per cent of the labour force.

**Greater Unemployment Rate (GUER)**

This is the sum of the unemployed who are willing to work and are actively looking for a job and the unemployed who are willing to work and are not actively looking for a job, expressed as a per cent of the greater labour force.

**Date of status**

The employment / unemployment status (or activity status) is measured as of the date of the survey.

## Survey Design

The unemployment rate in India is estimated from data collected regarding the employment / unemployment status of all members of 15 years and more of a sample of randomly selected households.

The individuals surveyed are members of a panel of households included in CMIE's Consumer Pyramids survey. Answers to employment / unemployment status questions are administered along with CMIE's Consumer Pyramids survey.

CMIE's Consumer Pyramids panel of households contains over 174,405 households. These include over 522,000 members who are 15 or over 15 years of age. This is the largest sample of households and individuals from whom data is gathered on the employment and unemployment status. In comparison, the National Sample Survey Organisation's 68th Round on employment and unemployment was conducted on a sample of 101,724 households involving 326,810 individuals of 15 or greater than 15 years of age.

While the NSSO completes its survey of 101,724 households in one year, the Consumer Pyramids sample is surveyed in four months.

The Consumer Pyramids survey is conducted all over the country, except in the following north eastern states - Arunachal Pradesh, Nagaland, Manipur, Mizoram, Andaman & Nicobar Islands, Lakshadweep, Dadra & Nagar Haveli, Daman & Diu. The survey covers all other parts of the country.

A stratified multi-stage survey design was deployed by CMIE to draw its sample of households. The Primary Sampling Units (PSUs) were the villages and towns of the 2011 Census. The Ultimate Sampling Units (USUs) were the households from these PSUs.

The broadest level of strata for sampling purpose was the Homogeneous Region (HR), which is a set of neighbouring districts that have similar agro-climatic conditions, urbanisation levels and female

literacy. HRs are also approximately of the same size, except in the north east, where the entire set of north-eastern states is considered as one HR.

The sub-strata are the rural and urban regions within each strata, ie within each HR. The sampling frame for rural PSUs was the list of villages as of the 2011 Census. The sampling frame for urban PSUs was the list of towns as of the 2011 Census.

Since there is much variance in the size of towns, towns within an HR were stratified further on the basis of their size. All towns of an HR were stratified into four strata based on the number of households in 2011, as follows:

- Very large towns with more than 200,000 households in 2011.
- Large towns that had between 60,000 and 200,000 households.
- Medium sized towns with households between 20,000 and 60,000.
- Those with less than 20,000 households were the small towns.

One or more towns were randomly selected from each of these size-bins. A total of 322 towns were selected through this process.

From each of these towns, 21 Census Enumeration Blocks (CEB) were randomly selected. A CEB is a cluster of about 100-125 neighbouring households. Households were then selected through a process of systematic random sampling from each of the CEBs. A total of 7,920 CEBs and 110,975 urban households were selected through this process.

Like the urban sample, the rural sample selection is also a two-staged sampling process. The first step in the design is to select villages and then the final step is to select households. Villages were selected through simple random sampling process. Villages are the PSUs. Households were selected from these through a process of systematic random sampling from each selected village. Rural India is surveyed in 102 HRs. The rural sample comprises 63,430 households from 3,965 villages.

## Sample Size & Distribution

The sample size is 174,405 households. Of this, 110,975 are urban households picked from 7,920 CEBs of 322 towns. And, the remaining 63,430 rural households were picked from 3,965 villages. This sample size is the outcome of the sampling methodology and decisions regarding the sample size at the Primary Sampling Units (PSUs) level. The sample size for the urban PSU (a sample town)

is 320 and the CEB within the town is fixed at 8. For the rural PSU (a sample village), the sample size was fixed at 16. The sample households from some CEBs and some villages were increased following a re-balancing of the sample in response to the 2011 Census results. The sample size from some CEBs was raised to 14 or 16. The larger urban sample size reflects the greater diversity in town-size and the approach of the sampling methodology to capture this diversity adequately. The final distribution of the sample is presented below:

State	Urban Sample			Rural Sample		Total Sample Households
	Towns	CEBs	Households	Villages	Households	
Andhra Pradesh	14	354	5,024	191	3,056	8,080
Assam	4	92	1,179	36	576	1,755
Bihar	16	369	5,078	269	4,304	9,382
Chandigarh	1	37	456	0	0	456
Chhattisgarh	9	202	2,864	121	1,935	4,799
Delhi	1	81	880	31	495	1,375
Goa	2	41	648	26	416	1,064
Gujarat	18	430	5,658	213	3,408	9,066
Haryana	11	273	3,874	104	1,664	5,538
Himachal Pradesh	2	45	640	40	640	1,280
Jammu & Kashmir	4	81	1,228	85	1,360	2,588
Jharkhand	8	187	2,534	136	2,176	4,710
Karnataka	17	449	6,341	211	3,376	9,717
Kerala	10	228	3,362	89	1,424	4,786
Madhya Pradesh	17	382	5,232	248	3,968	9,200
Maharashtra	37	929	13,626	388	6,208	19,834
Meghalaya	1	21	336	44	704	1,040
Odisha	12	258	3,737	189	3,024	6,761
Puducherry	2	44	644	31	496	1,140
Punjab	12	314	4,472	143	2,288	6,760
Rajasthan	20	474	6,934	247	3,952	10,886
Sikkim	1	21	336	30	480	816
Tamil Nadu	21	546	7,674	204	3,264	10,938
Telangana	10	300	4,022	113	1,808	5,830
Tripura	2	49	728	29	464	1,192
Uttar Pradesh	43	1,076	15,237	477	7,631	22,868
Uttarakhand	4	85	1,242	50	800	2,042
West Bengal	23	552	6,989	220	3,513	10,502
India	322	7,920	110,975	3,965	63,430	174,405

This sample size was frozen in the Round that began in September 2017 after a re-balancing of the earlier sample following the results of the 2011 Cen-

sus results. The sample size and its distribution will remain frozen till the next replenishment scheduled for May 2020.

## Estimation

Estimation is based on a probability based sampling design. We use stratified random sampling to increase precision. In stratified random sampling, the population is stratified into homogeneous sub-groups called strata. This process of stratification ensures that a pre-specified number of observations from each stratum ends up in the sample. An individual sampled with a sampling probability of  $\Pi_i$  represents  $\frac{1}{\Pi_i}$  individuals in the population. Thus,  $\frac{1}{\Pi_i}$  becomes the sampling weight.

All estimations are made using the Survey package for the R statistical environment by Thomas Lumley. The Horvitz-Thompson Estimator, which provides an unbiased estimate of population total and the population mean is used. This is a general estimator which can be used for any type of probability sampling plan, with or without replacement. It applies inverse probability weights to each individual who is a part of the sample chosen from the different population proportions. The Horvitz-Thompson estimator is statistically consistent and asymptotically normal, established when working with sufficiently large sample sizes.

## Wave-wise Unemployment Rate

The unemployment rate for a Wave is computed at India level, at the state level, with separate computations for the urban and rural regions. The sampling design for estimation of Wave-wise unemployment rate is based on the existence of 196 strata. The population is stratified at the Homogenous Region level and region-wise (rural & urban). Each of the 99 homogenous regions sampled in our survey are further classified into Rural and Urban stratas. Chandigarh comprises only of the Urban stratum. Thus, we have a total of 196 strata.

In computing the unemployment rate for a Wave, we consider all the households in the sampling frame. The weight assigned to every member of the surveyed household, is calculated as a ratio of the estimated population at the end of the Wave to the sample population in that Wave. For urban regions, it is the ratio of total population ( $\geq 15$  years) in the urban Homogenous Region to the sample population ( $\geq 15$  years) in that Homogeneous Region. And for rural regions, it is the ratio of total population ( $\geq 15$  years) in the rural Homogeneous region to the sample population ( $\geq 15$  years) in that Homogeneous Region.

Estimated population of members ( $\geq 15$  years) in urban areas of a Homogenous Region for a Wave is calculated by using the Compounded Annual Growth Rate (CARG) on the Census 2001-Census 2011 data for the urban population of a Homogenous Region compounded on a daily basis. Similarly, estimated population of members ( $\geq 15$  years) in rural areas of a Homogenous Region for a Wave is calculated by using the Compounded Annual Growth Rate (CARG) on the Census 2001-Census 2011 data for the rural population of a Homogenous Region compounded on a daily basis.

Sample members ( $\geq 15$  years) in urban areas of a Homogenous Region for a Wave are members ( $\geq 15$  years) of all the urban households in the sampling frame for the Wave. And sample members ( $\geq 15$  years) in rural Homogenous Region for a Wave are members ( $\geq 15$  years) of all the rural households that are in the sampling frame in a Wave.

**The unemployment rate for the  $j^{th}$  stratum in a Wave, is calculated using the following formula:**

$$\text{Wave wise unemployment rate for the } j^{th} \text{ stratum} = \hat{U}_{rj} = \frac{\sum_{i=1}^{n_{rj}} (\frac{1}{\Pi_{i,rj}}) X_{i,rj}}{\hat{L}_{rj}} = \frac{\sum_{i=1}^{n_{rj}} (\frac{1}{\Pi_{i,rj}}) Y_{i,rj}}{\sum_{i=1}^{n_{rj}} (\frac{1}{\Pi_{i,rj}}) Y_{i,rj}}$$

Abbrrevation	Description
$n_{rj}$	total sample size of the $j^{th}$ stratum in a Wave.
$\Pi_{i_{rj}}$	probability of $i^{th}$ person getting picked from the $j^{th}$ stratum in a Wave.
$\frac{1}{\Pi_{i_{rj}}}$	weight assigned to the $i^{th}$ person picked in our sample from the $j^{th}$ stratum in a Wave.
$X_{i_{rj}}$	unemployment status of $i^{th}$ person in the $j^{th}$ stratum. This is the dummy numeric variable which was added to the data file in the UNEMPLOYED column. If a member is unemployed, this variable was set to 1, else it was set to 0. A member is unemployed if the person reports that s/he is unemployed and is willing to work and is actively looking for a job.
$Y_{i_{rj}}$	labour force status of $i^{th}$ person in the $j^{th}$ stratum. This is the dummy numeric variable which was added to the data file in the LABOUR_FORCE column. If a member is a part of the labour force, this variable was set to 1, else it was set to 0. A member is a part of the labour force if the member reports that s/he is employed or s/he reports that s/he is unemployed but is willing to work and is also actively looking for a job.
$\hat{U}_{rj}$	estimated Unemployed persons in the $j^{th}$ stratum in a Wave.
$\hat{L}_{rj}$	estimated Labour force in the $j^{th}$ stratum in a Wave.

### The unemployment rate for a Wave is calculated using the following formula:

The Wave-wise estimations for India are calculated as a ratio of the total estimated unemployed persons in a Wave to the total estimated labour force in a Wave. The total estimated unemployed per-

sons is the summation of the estimated unemployed persons from each of the 196 strata. The total estimated labour force is the summation of the estimated labour force, from each of the 196 strata.

$$\text{Wave wise unemployment rate} = \frac{\hat{U}_r}{\hat{L}_r} = \frac{\sum_{j=1}^{196} \hat{U}_{rj}}{\sum_{j=1}^{196} \hat{L}_{rj}} = \frac{\hat{U}_{r1} + \hat{U}_{r2} + \hat{U}_{r3} + \dots + \hat{U}_{r196}}{\hat{L}_{r1} + \hat{L}_{r2} + \hat{L}_{r3} + \dots + \hat{L}_{r196}}$$

## Execution Machinery

Questions related to unemployment are tagged along with the rest of the Consumer Pyramids survey. The execution of the survey for the unemployment estimations are therefore simultaneous and co-terminus with the execution of the Consumer Pyramids survey.

The Consumer Pyramids survey is executed by a door-to-door canvassing of the questionnaire as per a fixed plan. The plan consists of the following steps:

1. The entire sample of 174,405 households is surveyed during a period of four months. This is called a Round. There are three Rounds in a year.
2. Each Round is a Wave. The first Wave was executed during January - April 2016. This is the twelfth Wave.
3. The entire sample of about 174,405 households is divided into roughly four equal Slots to be executed in the four months of a Round. Each Slot consists of about 43,601 house-

holds. These are surveyed during a month. Each household is mapped to three Slots that are four months apart each and this mapping remains fixed.

Slot1	Slot2	Slot3	Slot4
Round1 January	February	March	April
Round2 May	June	July	August
Round3 September	October	November	December

4. Execution during a month is organised into weekly plans. Before the beginning of a week, the precise visits to households of the Slot are fixed.
5. Execution is then monitored for timely execution and for quality.
6. Data is collected from the field on hand-held GPS enabled phone devices. Data from these are uploaded from the field immediately after completion of survey and cross-checked centrally to ensure plausibility of the entries.
7. Execution is tracked using multiple tools - ranging from GPS location tracking, callbacks and ground supervision.
